India, has emerged as an influential democratic nation at the global level. Indian economy is comparable to that of the developed nations, as we have maintained, more or less, consistency in the world economic scenario. The contribution of Agriculture and allied fields, in earning foreign exchange and maintenance of the nation's economy in terms of gross domestic product per capita income etc., is enormous. Yet production and productivity in many crops/allied field is not reached its full potential.

Hence, Agriculture and its allied fields need to be equipped with pedagogy and important latest Agricultural knowledge in Education, continuance of research and development, as well as extending the extension services. Several of the discoveries, innovations, improved technologies in Agricultural field are not reaching the farmers. Although Agriculture is the Backbone of India, seeking Agricultural education, was the last resort, in past. The days have changed. The people of the present -day generation are showing inclination towards Agriculture. Probably, they may be aware of drastic positive and encouraging changes occurring in the field of Agriculture. Agriculture is the mother of all cultures.

Development in the field of Agriculture is of utmost importance, compared to developments in other fields, as Agriculture is for the survival of the mankind.

Hence Agricultural and allied Sciences Universities were established across the globe. The present- day Agricultural education in India is skill and practical oriented, with emphasis on latest technologies in the field of Agriculture. In majority of the Agricultural universities separate reservations are made for the candidates from the farming community. Even though Agriculture is the main occupation for the majority of the populations, it is not taught in school or college as that of STEM subjects (Science, Technology, Electronics and Mathematics). The students graduated from Agricultural Universities mainly seek employment rather than creating employment and that needs to encouraged.

In order to enhance the knowledge on Agriculture and making it as preferred profession, the Creative Agricultural Sciences Academy (CASA) has been created by well qualified and experienced Agricultural professionals along with reputed empaneled experts with the following objectives.

1. To create awareness about Agriculture and allied subjects at School and College levels.
2. To conduct trainings about Agricultural Education and create awareness on its Career opportunities.
3. To conduct Trainings for different competitive exams where the knowledge of Agriculture and allied subjects can be put to good use.
4. To assist for placement and startups in the field of Agriculture and allied fields.
5. To provide consultancy services in Agriculture and allied fields.
